Rooftop units, also known as self-contained air conditioning units or unitary systems, are often critical for maintaining comfortable indoor environments in commercial spaces such as offices, hospitals, data centres and retail establishments. In the event of a malfunction or breakdown of the primary rooftop unit, having an emergency rental unit ensures that operations can continue without significant disruption.

Trane self-contained air conditioning units are considered the best choice for businesses seeking reliable, energy-efficient and innovative HVAC solutions that deliver superior performance whether in an emergency, or for short- or long-term hire.

Airfinity(TM) units are all-in-one systems that provide heating, cooling and ventilation. They're designed to be easy to install and operate, making them a good choice for temporary structures such as marquees at events, where keeping costs low and installation simple are key.

Our certifications, accreditations and industry associations establish trust and provide our customers with confidence in our expertise and commitment to upholding the highest standards. We're dedicated to maintaining reliability, ensuring compliance and delivering exceptional quality, all while demonstrating the highest level of professionalism.

Trade Associations and accreditation awarding bodies play a crucial role in demonstrating our commitment to industry standards and best practices. For Trane, these credentials not only validate our expertise but also enhance operational efficiency, safety and regulatory compliance. Below is a list of key organisations and systems that support us in achieving these goals, from streamlining supply chain management to ensuring robust health and safety practices. Each partnership underscores our dedication to excellence and innovation.

At Trane, we provide dependable, flexible process cooling systems to keep your processes running smoothly at their optimal operating temperatures, whatever the requirement. We understand the importance of maintaining peak performance, which is why we offer advanced technology for total process cooling, keeping your systems efficient and reliable.

We deliver dependable and flexible rental process cooling solutions essential for maintaining business excellence across various sectors and types of emergency. We understand the importance of uninterrupted operations, with our fleet of energy-efficient chillers, ranging from 12kW to 2,000kW, is supported by 24/7 nationwide call-out services to address any system failures quickly, ensuring your business remains protected.

Renting from Trane comes with several advantages: lower upfront costs, included maintenance and repairs, and access to cutting-edge technology. Our process cooling systems offer financial predictability with fixed

monthly payments and flexibility for short-term needs without long-term commitments. Professional installation and round-the-clock customer support can be included, ensuring seamless operations from the start.

Our process cooling chillers are designed to handle various applications, with the capability to operate in ambient temperatures as low as -18°C. These chillers can also cool water down to -12°C. When a single chiller cannot meet your capacity needs or suit space constraints, we can install a temporary plant with multiple units to ensure optimal performance.

Trane's rental fleet is always ready for fast delivery and seamless commissioning, with the ability to ramp up capacity quickly when production or demand increases. Contact us via phone or through one of our forms and our team will work with you to provide solutions that meet your cooling requirements.

At Trane, we're upholding a long legacy of ecological innovation by delivering cutting-edge climate solutions, including sustainable heating and cooling systems. In fact, Trane Technologies was recently named by Time Magazine as one of the World's Most Sustainable Companies of 2024.

Sustainability has always been central to our strategy. For many years now, we've made it our goal to tackle global challenges head on. As a result, Trane leads the sector in developing innovative, sustainable solutions that benefit our planet and all its inhabitants.
