

## 24v lithium ion battery for mobility scooter

### 24v lithium ion battery for mobility scooter

The Solax mobility scooter battery is 24 Volt / 10 Amp Power, designed to travel 13 miles on a single charge. They're airline-approved and weigh just 4lbs, making them the perfect battery to take with you on holiday. They need a full night's rest to fully recharge them (around 8-10 hours), so we recommend plugging them in to charge the night before. They're compatible with a wide range of scooters including Monarch Smarti, Mobie Plus and more.

Strident batteries are made using lead-acid - whilst this doesn't last as long compared to lithium-ion, they are a great cost-effective solution. They're rechargeable and combined with critical conductive properties for an all-round better performance. These have undergone rigorous stringent quality tests to ensure the highest quality possible.

There are two types of mobility scooter batteries; lithium-ion and lead-acid. Lithium-ion batteries have a longer lifespan and are generally considered to be better than lead-acid batteries, however, they cost more. Lead-acid batteries are still effective, but they do weigh more and will not last as long.

With highly competitive prices across both lead-acid and lithium-ion batteries, alongside fast & free delivery, you can shop with full confidence today. Join hundreds of satisfied customers and order today!

Mobility Solutions Direct Ltd trading as Mobility Solutions Direct is an Appointed Representative of Snap Finance Ltd which is authorised and regulated by the Financial Conduct Authority (Firm reference number 741813). Snap Finance Ltd act as the lender
