

30 amp ups battery backup

30 amp ups battery backup

The (AC) wall outlet power is first converted (DC) battery power, from battery power converted back to (AC) power. This way, your connected equipment is totally isolated from the outside environment, providing the ultimate power protection.

It keeps your equipment going in case of power outage. The surge protection protects your gaming console, PC computers, monitors, modems, routers, switches, Ethernet data (RJ45) cables or (RJ11) phone lines from lightening due to weather storms, and various power issues.

The windows PC software can send you power issue notification emails. It is programmable to shutdown at a set time (E.g., 5 minutes) or when battery reaches certain percentage level (E.g., 25%). In case you are away, our software safely shuts down the computer or server by using included USB cable.

It is designed for network, computer, server, lab instrument, testing equipment, automation and more. Online UPS is not a further improvement of traditional standby or interactive UPS, but a completely different approach to providing the highest level of power

CALIFORNIA PROP 65: WARNING: This product can expose you to chemicals including lead which is known to the State of California to cause cancer and birth defects or other reproductive harm. For more information go to
