Available as Grid-Tied and Battery Charge, the SD3 is designed with ease of integration in mind. The intelligent design delivers consistently high performance in all wind speeds. Our unique over-speed protection system ensures continuous energy generation during extreme winds which provides better value to users and operators. As wind speeds increase, the SD3 will maintain output and performance compared to alternative wind turbines which need to brake themselves in strong wind conditions.

Internationally recognised for its unrivalled runtime, the SD3 small wind turbine has now accumulated over 25 years in the industry, bringing continuous power to some of the most remote locations on the planet.

There have been over 100 of our SD3 wind turbines operating in The Falkland Islands since 1992. Taking advantage of the strong winds, the turbine blades pitch and cone to ensure a high output even in the fiercest storms.
