Feature papers represent the most advanced research with significant potential for high impact in the field. A Feature Paper should be a substantial original Article that involves several techniques or approaches, provides an outlook for future research directions and describes possible research applications.

Editor's Choice articles are based on recommendations by the scientific editors of MDPI journals from around the world. Editors select a small number of articles recently published in the journal that they believe will be particularly interesting to readers, or important in the respective research area. The aim is to provide a snapshot of some of the most exciting work published in the various research areas of the journal.

The historical and current development of large and small hydropower in Algeria is presented, with an overview of the institutional, legal and planning framework regulating the selection of suitable locations, permit issuing procedures and functioning. The study includes a review of locations at which construction of new facilities can take place. It analyses the environmental and socio-economic consequences of both large and small hydro projects.

Algeria pumped hydro storage

The bi-monthly International Journal on Hydropower & Dams features research papers, case studies, project updates, business and financial news, and policy papers aiming to help advance the state-of-the-art of dam engineering and hydropower development.

Subscribe Now Special Publications World Atlas of Hydropower & Dams 2024 Energy data from more than 180 countries and guide to companies and organizations active in hydro and dams.

Our programme of international events bring together experts from across the industry to explore the latest technical innovations, financial and operational challenges and new development opportunities.
