

Antigravity batteries UK

Antigravity batteries UK

At just 2.3kg, and boasting a huge 900 cranking amps, the ATX-20-HD is ideal for light saloon race and track applications, whilst giving a significant weight saving over traditional batteries.

The NEW Antigravity ATX-20-HD battery is a High Power, lightweight lithium replacement for the popular YTX-20 size Lead / Acid battery. This is our HEAVY DUTY version, designed with significant Power and Amp-Hour Capacity in this popular case size.

You must use a Lithium Ion compatible battery charger for these batteries. Failure to do so will result in damage to your battery – traditional charges for lead acid batteries are not suitable. We offer the CTEK CT5 Powersport charger for our range of Antigravity Batteries. Please contact us if you are in doubt.

Due to the large number of products in the Antigravity battery range, we only list popular options on our webshop. If you have a specific model you require, please do contact us.
