Asuncion electricity rates

Asuncion electricity rates

A new pilot program rolling out in the summer is meant to save customers money, but it could cost some folks more. It's called time of use, and it will change how much your electricity costs depending on when you use it.

"Time of use is really all about customer choice, you have the ability to control your usage you can see how much it's costing you, make changes in your lifestyle or charging or use of energy so that you can maximize the use of energy," PUC Chair Leodoloff R. Asuncion said.

"It's probably the biggest change in how customers are billed and how rates are set over a century," HECO Government & Community Relations Vice President Jim Kelly said.

"We are going to have a lot more lower cost resources that are online during the day with solar and storage as well. The idea is to send price signals to customers that are more closely aligned with the actual cost of producing the electricity at the time they use it," Kelly said.

State Senate Energy, Economic Development, and Tourism vice chair Glenn Wakai (D) suggests having the daytime rate far below the current Oahu rate of 41 cents per kilowatt hour.

"We should be starting the discussion at a much lower rate, right now solar and battery is coming in solar is coming in at 8 cents with battery, it's 11 cents," Sen. Wakai said.

The PUC is creating a plan to stop bills from ballooning, with an approved "bill protection" for the first six months that customers are on the new rates. This makes a maximum $10 increase from what a bill would have been without TOU rates.

HECO is recommending folks participating in the pilot program or the eventual customers placed on TOU rates utilize weekends or days off to use heavy energy appliances like driers. For more tips on energy savings, click here.
