

## Bahrain power outages

Since its establishment in 2009, the Gulf Cooperation Council (GCC) Interconnection Authority has intervened over 2,700 times to stave off power outages across the Gulf Cooperation Council nations.

Al Ebrahim highlighted that the interconnection network has demonstrated its capacity to handle sudden spikes in demand or unexpected outages, thus preventing widespread blackouts that could severely impact economies and daily life, as reported to our sister concern Alayam.

“We expect further demand increases if the current weather conditions and high temperatures continue, particularly in August when people return from vacations and consumption rises,” he explained.

This project, the largest undertaken by the authority, will provide Kuwait with approximately 2,500 megawatts and lay the groundwork for future interconnection with southern Iraq.

Throughout the Middle East, extreme heat is leading to increased demand for energy, which is leading to widespread power and water outages affecting millions. Protesters are demanding these services.
