

Baird and brown solar panels

Baird and brown solar panels

As Ashford-based solar panel specialists, you'll be pleased to hear that residents of our commuter town wrote most of our excellent reviews. With national solar panel companies, installations are outsourced to installers with all experience levels, knowledge, and quality standards. So, it's a gamble whether you're lucky to receive installers who are rated five stars. Save yourself from disappointment by contacting us, your local installers with a 5-star reputation.

BAIRD AND BROWN LTD is MCS certified. You can verify our claim by inputting our certification number on MCS's website: NIC-006616. You must choose an MCS-certified solar panel installer. Certification proves that solar installers recognise industry standards and can conduct your installation the right way, every time.

In addition, as competent electrical engineers, we're NIC-EIC-approved contractors. We're continuously assessed to ensure we meet safe electrical installation and repair standards. So, whether you're thinking about a solar system with solar battery storage and an electric vehicle charger, you can be confident we'll do it the right way. Before working with any solar service, verify their accreditations.

Installation of a solar panel system is one part of the equation for saving money on your electricity bills. Joining forces with the right energy supplier will allow you to shorten the time it takes for you to receive your initial investment. Unlike other solar panel installation services, BAIRD AND BROWN LTD offers free import/export tariff support so that you're on the best tariff to maximise your energy bill savings today.

Most of our customers opt for solar panel battery storage for two purposes. Store the 'free energy'; their solar panels generate and buy 'cheap energy'; overnight. Ensuring your solar battery storage system is set up to store and use the cheapest energy is critical to reducing your monthly electricity bill by a large margin. We do your battery installation and setup the right way.

All of our solar power installations include bird proofing, which is installed as standard to assist with the longevity of your solar panels. Birds will inevitably find shelter underneath your solar panels, so we prevent it painlessly with mesh netting around the gaps. Bird proofing your solar panels stops them from knocking and chewing wires, which will ensure your system maximises its performance.

Owners David and Philip are passionate about renewable energy and value every customer. Over time, energy suppliers change their import/export rates. We want every customer to maximise their electricity bill savings, so we offer lifetime support in case you need our assistance.

We'll help you achieve the most competitive import/export tariff. We'll even set up your battery to charge for cheap electricity. And tweak any settings in the remote cloud application.

We're one of a few, possibly the only, solar panel installers in Kent who offer to record the installation. In a timelapse video, you can watch the installation of the solar panels on your home from start to finish.

The government hasn't charged VAT for some renewable energy solutions like solar PV panels since the 1st of April 2022. However, 0% VAT only applies until the 31st of March 2027, at which point it becomes 5%.

Ashford homeowners who want to save money on our solar panel packages, which include the PV panels and installation, you've got until March 2027. After this date, the VAT rate is lifted to 5%, and the solar panel installation cost will rise.

Since the 1st of January 2020, homeowners can sell excess solar energy to the grid. When your battery storage is full, your household uses little electricity, and your photovoltaic solar panels generate lots of energy. You can receive between 1 and 7.5p a kW/h.
