

Banner battery

The Banner Starting Bull battery range is Robust, fully proven and thoroughly optimised. The Starting Bull is a powerful entry into the Banner brand world. This absolutely maintenance-free battery scores with top features and performance. In addition to calcium / calcium technology, the Starting Bull offer 12 types with reliable four-chamber leak protection and enhanced safety due to central degassing and integrated backfire safeguard. First class attractive design with new terminal covers represents a clear indication of the potential of this battery.

Conventional WET batteries such as lead-acid batteries are the most common types of battery. This technology is often referred to as SLI, which relates to the main functions of a vehicle battery: Starting, Lighting, and Ignition. They are mainly suitable for older vehicles and vehicles without start-stop technology. Best for vehicles with minimal electrical needs.

The Banner Running Bull AGM battery range covers the majority of new vehicles fitted with an engine start/stop function, in order to achieve the CO₂ limitation targets set by the EU by means of sustained fuel consumption savings and emission reductions. In general, two differing starter battery types are employed in these environment-friendly vehicles, consisting of the absorbent glass mat (AGM) and the enhanced flooded battery (EFB) systems. The use of the appropriate technology depends largely on the fuel and CO₂ savings that can be attained.
