

## Battery for solar panel system

When looking at solar panels, one of the biggest concerns almost everyone has is matching their wattage to the particulars of their home. Solar panel systems generally range from 1kWh to 4kWh (kilowatt hours). However, larger households may need something with a lot more capacity, like a 6kW solar system.

6kW (kilowatts) solar panels are ideal for households of 5 persons or more as they provide the right power output to keep your home comfy and energised while also keeping it eco-friendly. Let's take a look at what 6kW systems have to offer and when you might need them. (If you're looking for a smaller option, consider a 4kw solar system instead).

However, if you've already made up your mind as to what system you need, then you'll need to search for quotes from trusted solar installers in your area. One common way to do it is to search for and reach out to the installers yourself. But how time-consuming and stressful would that be?

You can sacrifice your valuable time off with family in favour of googling and reaching out to installers. However, you might still end up disappointed with zero reliable contacts at your fingertips.

Fortunately, Solar Guide can help you avoid the hassle of finding a trusted installer on your own. Fill out our short form and we'll provide you with the best prices from up to 4 vetted installers near you. Then you can compare the prices with no obligations to place any orders. To receive multiple free, non-binding quotes for the solar system of your choice, click the link below.

6kW solar systems are high power and can cover more than what an average household needs. They are best used for larger households or ones with unusual energy requirements such as space heating or air conditioning. Even if your home doesn't end up using all the extra produced power, you can still leverage the advantages of solar energy by returning energy to the grid for money (more on this later).

A proper 6kW system with a solar battery requires a decent amount of roof space (usually 38m<sup>2</sup> to 43m<sup>2</sup>) and possibly some additional loft space to store an inverter that can convert DC (direct current) to AC (alternating current). The most optimal angle of solar panels in the UK is an incline of 30° to 45° with your roof facing south.

A 6kW solar system with a battery in the UK is priced at £12,500 to £20,500, ordinarily. However, you may have to pay additional charges if you already have a solar panel but need to retrofit a battery onto the existing system, as this often requires the implementation of additional components.

You would require roughly 38m<sup>2</sup> to 43m<sup>2</sup> of roof space to install systems of this size. Other factors that might affect the price are whether you opt for ground-mounted, on-roof panels, or integrated solar panels.

# Battery for solar panel system

In order to generate 6,600 watts of power, you will need 19 panels with a wattage of 340 watts each. As a rule of thumb, homeowners usually have anywhere from 17 to 24 6kW solar panels installed.

Solar Guide is here to help you avoid time-consuming browsing. Complete our short form and receive up to 4 free quotes from trusted solar panel installers in your area. Our service is free and non-binding - just compare the offered quotes with no pressure to place any orders. Click below to get hassle-free solar quotes.

The standard cost of a 6kW solar panel system can stretch between ?9,500 and ?10,500 on its own. The cost of a 6kW system with a battery can be higher since a battery adds ?3,500 to ?10,000, depending on the capacity. Keep in mind that this is the price for the system itself and the costs of installing solar panels are separate. A 6kw solar system with a battery price in the UK starts at roughly ?12,500.
