Battery management systems kampala

With our inbuilt battery management system you'll be able to track power usage, remotely turn it on/off via Bluetooth, and with further IoT integrations in development including 3G connectivity and GPS tracking, our battery is future proofed

The battery management system (BMS) is the intelligent component of a battery pack. Ours is customized for the application in the African context and optimized for safety, cost, reliability, performance and size.

Soon coming is our universal GaN charger allowing to charge with solar (DC) or of the grid (AC). Our charger is 5X smaller & lighter than conventional chargers while providing exceptional energy efficiencies. It's uniquely small design allows for integration into battery packs.

Bodawerk is developing ultra-efficient transformer-less inversion circuits allowing to convert DC energy back to AC. Our SMD-based designs unlock lower cost, higher energy efficiencies and disruptive savings in weight and size.
