

Battery testing mexico

The battery is the key component of the electric vehicle. As demand for electric cars and vehicles increases, manufacturers need to be confident the high-voltage batteries they use meet international standards for safety, reliability, endurance, and performance.

All battery tests are conducted in accordance with international standards and original equipment manufacturer (OEM) specifications including ISO, IEC, UN ECE, SAE, LV, AK and many more. We can also perform bespoke tests to customer requirements if required.

Electromobility is undergoing rapid technological change. As well as being actively involved with standardization bodies, we offer full consultancy and testing services, helping manufacturers create efficient, economically viable electric vehicles and cars.

With ISO/IEC 17025 laboratory accreditation, lithium battery expertise and over 30 years' experience of the requirements and test methods of vehicle manufacturers, we can meet all your battery testing needs.

Our Production and Environmental simulators test and assess the quality, durability, and performance of batteries to make sure they meet your exact specifications and stringent industry standards.

Many industry standards and EUCAR safety level standards are necessary for Battery Production and Testing. Our test chambers can measure the safety, performance, and reliability of batteries based on standards established by the International Electrotechnical Commission (IEC) and other international manufacturing associations. We also can test, measure, and assess products based on the exacting and stringent requirements requested by the client.

Weiss Technik helps make the task of compliance with the QS9000 3rd Edition Calibration Mandate much simpler. There is no need for you to take the time to actively seek an accredited laboratory.

Weiss Technik, certified ISO9001 in 1997, can provide the latest required ISO/IEC 17025 (A2LA accredited) calibration services at your facility. These services meet 17025 requirements and ensure that your company is in compliance with the most recent changes in the QS9000 3rd Edition mandate.

With the growing demand for electrified systems and products, the battery has become increasingly important. As a result, the demands placed on this critical vehicle component have increased dramatically. To ensure that batteries deliver optimal performance over the longest possible lifetime while meeting strict safety standards, we have developed the AVL Battery TS(TM) End Of Line. From modules to battery packs, this test system enables battery testing in production. The system covers Conformity of Product (CoP) and Quality Assurance testing.
