Benin europe renewable energy

Benin, a West African lower-middle-income country, has approximately 14 million inhabitants, 65% of whom are under 20 years old. Its strategic location on the Gulf of Guinea makes it an important commercial hub. However, its northern regions face significant challenges due to escalating instability and insecurity in the Sahel.

To address these issues, the government has launched ambitious reforms aimed at improving public finance management, stimulating economic transformation and industrialisation, and promoting human capital.

The EU supports Benin's journey towards sustainable and inclusive development, aligning with the "Programme d'action du Gouvernement 2021-2026", the "Programme national de Développement 2018-2025" and the Global Gateway Strategy. This comprehensive partnership fosters a prosperous, secure society through support for the green transition, human capital, and economic opportunities.

Team Europe in Benin brings together the EU, the European Investment Bank (EIB), Belgium, France, Germany, Luxemburg, and The Netherlands. Through the Neighbourhood, Development and International Cooperation Instrument (NDICI-Global Europe), the EU allocated EUR 255 million for Benin over 2021-2024. Benin also benefits from various multi-country and globally supported EU initiatives notably from the regional programme for Sub-Saharan Africa for 2021-2027.

The upgrade of large-scale solar power plant and photovoltaic minigrids will contribute to increasing the production of renewable energy and strengthening Benin's grid integration within the regional market.
