

Berlin manufacturing energy storage

The EnergySphere Berlin is the place to experience and influence the global energy transition, today and tomorrow. In Berlin we have prepared and keep building a unique setting to explore several facets around the energy transition. Following our motto: "There's no single silver bullet for the energy transition", we are ready to engage around products, solutions, manufacturing, services, testing, innovation and more.

"By choosing Berlin, we are linking the historical roots of Siemens Energy with the shaping of the future, more sustainable energy world." (Christian Bruch, press release September 24, 2020)

One Innovation Center, at four locations worldwide (Berlin, Abu Dhabi, Shenzhen, Orlando), is an ecosystem with start-ups, industrial partners and universities for business development and new technology introduction with the focus on the five fields of action.

The highly automated electrolyzer stack production is a joint venture with Air Liquide and will start the serial production with 1GW at the end of FY23 (FY25: up to 3GW) in Berlin and thus represents a future technology to support our customers in transitioning to a more sustainable world.

Four training institutions in one place cover trainings in 15 professions and hundreds of trainings around the Siemens Energy portfolio for customers, internal and external trainees as well as professionals - with more than 2000 participants per year.

Manufacturing location since decades, but always with a focus on new technologies (H₂ co-firing), the global center of competence in Berlin develops, manufactures, maintains, and offers large gas turbines from 100 MW to 600 MW.

The focus of our pilot line in Berlin is still on rapid prototyping to support gas turbine components and system testing to accelerate development cycles, but new technology areas (e.g. fuel cell systems, direct air capture) are already being actively addressed by our AM experts and soon in cooperation with the Technical University of Berlin.

High-pressure test facility for gas turbine combustion and components under real conditions focusing on hydrogen with cutting-edge measurements and analysis techniques to the capacity of 24-hours-testing for maximum flexibility.

Our Blue products use vacuum switching technology and clean air insulation to produce Zero harmful emissions - and without having to compromise on performance or economic feasibility.

Berlin manufacturing energy storage

The Berlin site is part of a global internal and external manufacturing network (Charlottesville, Tampa, Orlando, Budapest, Yixing, Finspang) that processes and refurbishes highly automated gas turbine blades with a focus on coating, drilling and repairing.
