

Best solar oven for home use

Best solar oven for home use

The best solar ovens are weatherproof, sturdy, and capable of withstanding the rough and tumble of traveling over rugged terrain. With its handy carrying case and robust design, the MrMapMax is a good choice, although the inner tube still needs protection.

A solar oven can be the perfect alternative to a propane or charcoal grill for the eco-conscious. Humanity has been harnessing the sun's energy for thousands of years, but these best solar ovens work to bring solar energy into the 21st century. We put each solar oven to the test and here are our top picks!

This powerful solar oven can reach a maximum temperature of 550°F, making it suitable for steaming, boiling, baking, and even roasting. It can cook a meal in just 20 minutes in full sunlight, regardless of the outside temperature, so it is suitable for use in extreme conditions.

This type of tubular solar oven works a little like a thermos. The parabolic reflectors on either side focus sunlight onto the vacuum tube in the center. The tube acts as an insulator, converting up to 80% of the sun's rays into heat.

This solar cooker weighs just 11.2 lb and takes seconds to set up. It has a carry case with zippers that reveal the parabolic reflectors that capture the sun. Food inserted into the inner tube cooks evenly, retaining moisture and tenderness.

The All Season Solar Cooker is similar to the first solar oven ever invented and uses the same boxlike structure to achieve its goals. Weighing just 4lb, it arrives as a flatpack that you can quickly assemble to create a simple yet effective solar cooker.

Many solar ovens work only when the sun is high in the sky. The All Season Solar Cooker allows you to adjust the angle of the reflector panels and capture the sun's power from the moment it rises until the last rays disappear over the horizon.

The 17" x 12" cooking floor gives you enough room for a turkey roaster but will heat a cup of hot water just as effectively. This versatility makes it ideal for larger groups, as well as individuals.

Easily transportable, the All Season Solar Cooker folds into a neat package measuring just 0.5" x 24" x 48". Made of weatherproof polypropylene (PP) flute board, this solar oven is extremely rugged and won't tear, break, or become waterlogged. It's also one of the cheapest models currently available.
