When it was active the institution was largely run by volunteers and had the goal of educating visitors on the Canadian aerospace industry and technology.[6] It is a registered Canadian non-profit organization, operating as the "Canadian Air & Space Museum".[7]

In November 2018 it was announced that the museum would reopen at Edenvale Airport, 100 km northwest of Toronto, near Edenvale, Ontario, in 2019 and be renamed the Canadian Air and Space Conservancy.[8]

The museum was housed in what was the original factory for the de Havilland Aircraft of Canada. It is the oldest surviving aircraft factory building in Canada.[7] This building saw the creation of the de Havilland Beaver and Otter bush planes which helped to open the Canadian North, and was also the place where Alouette I, the first Canadian satellite was assembled.

At that time the Downsview museum had plans to further renovate the premises to better house their large exhibits and to provide more detailed information for visitors and school programs. Plans included specific galleries to house the full-sized Avro Arrow replica, another for the Avro Lancaster and additional galleries dedicated to the history of the de Havilland aircraft company, Canadian achievements in space, including a theatre and planetarium.

The museum was given the notice of eviction from its hangar ostensibly for failure to pay over Can\$100,000 in back rent, even though the museum was in the process of repaying the rent owed and had been assured they would not be evicted. The museum relocated the collection into storage by March 2012 before subsequently learning that all of the other tenants of 65 Carl Hall Road had also been served eviction notices and that Downsview Park intended to replace the entire facility with a hockey rink.

On 29 October 2011 it was reported that, although the museum building had previously been listed as a federal Heritage Building by both Parks Canada and the Federal Heritage Buildings Review Office, these listings had recently disappeared and Parks Canada claimed that they had been erroneous.[13][14]

In November 2018 it was announced that the museum's collection would be relocated to Edenvale Airport, 100 km northwest of Toronto. It will reopen in 2019 and be renamed the Canadian Air and Space Conservancy.[8] By mid-December 2018 the museum's Avro Arrow replica had been relocated from outdoor storage where it had begun to deteriorate, to an Edenvale hangar.[16]

The museum's collection includes: an Avro Lancaster that was undergoing restoration; a full-scale replica of the Avro Arrow, a de Havilland Tiger Moth, Grumman Tracker and many other Canadian-made aircraft. The museum also houses the original equipment that was used to build over a thousand Curtiss JN-4 biplanes in between 1917 and 1918, flight training simulators from the 1940s and 1950s, and exhibits relating to the history of Downsview air force base.

Das Museum gehört, zusammen mit dem Canada Agriculture Museum und dem Canada Science and Technology Museum, zur Canada Science and Technology Museum Corporation. Es ist Mitglied der Canadian Museums Association, dem Canadian Heritage Information Network und dem Virtual Museum of Canada.
