

Car batteries life expectancy

Car batteries life expectancy

Typically, the average car battery life is between three and five years. Pushing a battery longer than five years, even under perfect driving conditions, could cause your battery to fail without notice. For that...

The average car battery life is about three to five years. Some batteries can last significantly longer, however, if they are treated well and kept in a relatively stable environment. Many batteries sold today will...

The average lifespan of a car battery is between three and five years. However, battery life can vary based on a few factors. Where you live, the model of the car you drive, and the type of battery all play a part...

Here at GSF Car Parts, we have a huge range of car batteries for all types of car manufacturers and models. You can quickly search in your massive online store for the correct car battery by entering your reg number or by selecting your make and model.

We keep the major battery brands of Drivetec and Yuasa in stock that offer high quality and affordability. So, whether your car battery is dead or your car battery isn't charging properly, at GSF Car Parts we've got you covered.

Depending on how much you use your car and your driving circumstances, batteries will gradually deteriorate until they can't deliver enough power to start your engine. The time it takes for the battery to wear out could be anything from three to five years.

We offer free UK delivery on all online orders over £25, plus 60-day returns*. So, buy your car batteries from us with confidence today. Or if you're close to one of our 180 store locations across the UK & Ireland, just drop by and our experienced staff will be able to direct you to the right part for your vehicle.
