Central africa solar energy

As part of efforts to attain energy security, the Central African Republic (CAR) has launched a 25 MW solar power generation facility, inaugurated by President Faustin-Archange Touad?ra last week.

Developed under the country's Emergency Electricity Supply and Access Project, the World Bank-funded Danzi Solar Plant is said to be the largest solar facility in Central Africa. Comprising 47,000 solar panels, the project will be critical in helping CAR meet its energy demand and could replace up to 90% of energy currently produced by diesel fuel in the country.

According to President Touad?ra, the inauguration of the solar facility marks a significant milestone in the country's efforts to diversify its energy mix and unlock its renewable energy potential through the development of solar, biomass and hydroelectric power.

The MSGBC Oil, Gas & Power conference remains the only event entirely dedicated to exploring energy opportunities in Mauritania, Senegal, The Gambia, Guinea-Bissau and Guinea-Conakry.

Delegates are able to access high-level insights from African policymakers and government officials, one-to-one investor matchmaking services and exclusive oil and gas market forecasts.
