

Cheapest ev charger installation

Cheapest ev charger installation

It's not recommended that you install an EV home charger yourself - it should always be done by a qualified and certified electrician. This ensures that the installation will be done safely and not jeopardise any warranty that might be applicable to the charger you choose.

The Department for Transport reports that transport is responsible for 26% of total UK greenhouse gas emissions, with over half of the UK's transport emissions coming from cars.

With an increasing number of environmentally conscious consumers, more accessible technology and government incentives to reach the UK's 2050 Net Zero carbon emissions target, the EV market is projected to grow significantly.

For many people, the most convenient way to charge an electric car will be at home. Not only will a home charger ensure you always have access to a charging point but it could increase the value of your property.
