

Climate change central africa

With many meteorological stations having fallen into disuse or now obsolete, the climate of the Central African Republic is one of the most poorly monitored in the world. Yet this green and fertile country is one of the most vulnerable to climate change - and the combined effects of this and armed conflict in the Sahel and Lake Chad regions are having a devastating impact on people's lives.

Livestock herders and farmers have always had a mutually beneficial relationship. Seasonal migration does not have to mean competing for water and land; it can offer a real opportunity for cultural, social and economic exchange. Herders can sell their animals and buy grain from the farmers. This is how alliances are created and bonds are forged, but only if harmony exists between the two groups.

Explore historical and projected climate data, climate data by sector, impacts, key vulnerabilities and what adaptation measures are being taken. Explore the overview for a general context of how climate change is affecting Central African Republic.

This Climate, Peace and Security Fact Sheet is focused on the Central African Republic and the series of conflict- and climate-related issues facing the country. The fact sheet offers a range of recommended actions for the international community to address these issues effectively.

SIPRI is an independent international institute dedicated to research into conflict, armaments, arms control and disarmament. Established in 1966, SIPRI provides data, analysis and recommendations, based on open sources.
