

Combination solar and wind power generator

Combination solar and wind power generator

As well as maximizing production across all seasons, the Un'ole hybrid energy system 'allows us to offer the most profitable, balanced and least expensive urban renewable energy production system in carbon cost,' writes the company. To ensure a low-carbon footprint, the wind turbines are built from recycled or recyclable materials (aluminum and stainless steel) and close to the operating site, promoting local production. The startup also adopts specific algorithms to determine the ideal number of wind turbines and photovoltaic panels for each type of building.

On the other hand, the French public agency CEREMA has certified that the startup's wind turbines operate silently without producing any harmful electromagnetic waves for both humans and building equipment. 'We have been able to test our wind turbines over several years thanks to the installations made for our customers and partners: the CUA, the city of Roubaix, social landlords, the CD2E, universities, etc.,' states Un'ole.

Structure-wise, the Un'ole system combines a row of wind turbines topped with solar panels, totaling a height of about four meters. The company works closely with a specialized design office, ESER, to adapt its technology to all types of flat roofs holding an area of 150 sqm or more. Last year, the team installed an experimental device at the CD2e LumiWatt site in Loos-en-Gohelle, Pas-de-Calais. If performance keeps looking as promising as it does now, the Un'ole platform will hopefully go into larger-scale production with the funds currently being raised.

happening this week! florim ceramiche spa creates porcelain stoneware ceramic surfaces for all architecture, building industry and interior design needs, overseeing many brands in europe, america and asia including floor gres, rex, cerim, casa dolce casa - casamood, FLORIM stone, and CEDIT - ceramiche d'italia.
