Companies in ghana making solar energy solutions affordable

Gas App provides real time, accurate LPG level readings using proprietary smart gas monitors and smart leakage detectors. Users can monitor LPG ratings from any location and on any device. After getting a notification from the smart app, a user can automatically get a filled LPG cylinder delivered directly at their doorstep. The company aims to address the issues of customers running out of gas without notification, as well as environmental issues such as fire outbreaks and gas explosions caused by LPG leakages contributing significantly to climate change.

Setech provides affordable clean energy technologies to households and small businesses in Ghana and Africa. While providing clean cooking and solar lighting solutions at affordable systems, SETECH has developed the usenpay innovative financial model where end-users are able to now pay for solar and tech enabled cookstoves in installments using a flexible payment platform. The fintech solution is to enable rural and peri-urban end-users be able to access energy technologies on credit and pay in installment over time using the pay-as-you-go business model

GCF Water is a subsidiary of Givers Care Foundation Ghana, an NGO that works in the areas of potable water provision, educational support, sexual reproductive health education and skills training. Through GCF Water the foundation reach out to rural communities with unimproved water sources, where the target group is educated on best practices in water and sanitation. Also, the introduction of the activated carbon water treatment unit is a new addition which is going to help in the treatment of water for the people.

Ecovon believe that there is a better way of making building materials. That is why we are focusing our energy on completely rethinking and re-designing how the new generation of building materials is made. Ecovon are developing sustainably sourced, newly engineered wood made from coconut husk and sugar cane bagasse, supplying the global market with a formaldehyde-free bio-based wood alternative that are better for people and planet.

families in West Africa

Because of the fragmented and undocumented nature of farming in Africa, farmers barely have access to financial services, because they have no digital identity. Annually, less than 3% of banking credit goes directly to farmers because of their perceived high risk and this has led to low productivity.

I have an idea of building an electromagnetic power generator for communities for clean sustainable energy and am looking for funding, assistance and mentorship to start up the industry for that matter.

Switch to us and have all the power you use matched back to 100% renewable electricity from our community of over 2,500 independent generators. Including smart EV tariffs, for lower cost charging.

Good Energy's latest rating from Citizen's Advice is 2.9 out of 5 stars. This rating is worked out across three different categories, including contact waiting times(3*), complaints (2*) and customer commitments (3*).

On this page you can see the rates of our current and historic tariffs. If you're looking for information about the features of the different tariffs that we offer, including the difference between fixed and standard variable tariffs, view our energy tariff explainer.

It takes a lot of work to genuinely support renewable energy. From buying power directly from independent generators, to working hard to match our supply with what our customers are using.
