

Compressed gas duster for computers

Compressed gas duster for computers

A compressed air duster can help you keep your PC and accessories clean. In this post, we've aggregated the best compressed air dusters for cleaning your PC. Let's check them out.

The 8-ounce Insignia Cleaning Dusters are undeniably the most affordable option. They come in a convenient 2-pack and provide ample cleaning power. The pinpoint nozzle ensures accurate airflow for precise cleaning around delicate components.

COMOBELIEF's Compressed Air Electric Duster is one of the most affordable yet effective compressed air blowers for cleaning your PC. The highlight of these devices is their reusability factor, which makes them more environmentally friendly. The duster comes with a variety of nozzles, which you can use to clean different types of electronics.

Additionally, these battery-run devices allow you to adjust the speed between 51,000 RPM, 71,000 RPM, and 100,000 RPM. Naturally, the variable speed makes them perfect for both delicate electronics and larger surfaces.

Alternatively, you can check out the KOONIE CD07 Duster. It's similar in terms of features, except it also has a step-less speed control for better control over the air pressure.

One of the features that helps the SIN SHINE AD01 stand out is the powerful motor that generates a strong airflow. As you may have guessed, it comes with a slew of nozzles. More importantly, it's a cordless electric air duster and can be reused time and again.

Alternatively, if you desire even more power, you can check out the XPOWER A-2S Cyber Duster. While it is a wired option, it can move up to 90 CFM, which is absolutely amazing.

The ATEngeus Compressed Air Duster & Vacuum does the dual job of blowing away dust (and keeping your devices clean) and collecting it at the same time. Yes, you read that right. This unique product combines a compressed air duster with a vacuum cleaner.

The product can go as high as 77,000 RPM. When needed, you can easily switch to vacuum mode with a simple twist. And in that mode, the cleaner can reach a max suction of 13,000 Pa. Additionally, for both modes, there's a normal and powerful mode for higher speed.

The Metro DataVac Electric Duster is a wired compressed air duster, which makes it one of the most powerful alternatives out there. It's cost-effective, owing to its reusable nature. It is powered by a 500-watt motor that generates a strong airflow.

Compressed gas duster for computers

At the same time, the variety of nozzles makes it easy to reach tight spots and corners. Moreover, it packs a removable filter. As such, you can easily clean or replace it when it gets dirty. That said, this wired air duster is quite expensive, so there's that.
