

Costa rica off-grid systems

Costa rica off-grid systems

To be able to find quality off the grid property in Costa Rica, you really need to stay out of the Central Valley, the most populated area of the country. Fortunately, the Central Valley is only 1/5th of the total territory, so you have plenty of choices.

Off-the-grid is a system and lifestyle designed to help people function without the support of remote infrastructures, such as an electrical grid. In electricity, off-grid can be a stand-alone power system or mini-grids typically to provide a smaller community with electricity.

Whether you are an off-grid nature lodge, restaurant, shop, rental car or travel company, IntiTech can provide your business with clean, reliable energy which can save you money while showing Costa Rica and the world you support the production of clean energy. Contact us today to talk to a specialist about how IntiTech can find a scalable solution tailored to fit your business requirements.

Everything is planned to take only what is necessary, through passive systems that are adapted to different configurations and to each of the living areas present in our country. We have based ourselves on three fundamental principles: efficiency, double functionality and maintaining a closed cycle, where each of these principles is materialized in the architecture.

The crossed ventilation, prefabrication, the extraction and induction system which passively takes advantage of the air currents and thermal differences, the reutilization of water for food production and the solar radiation protection, as well as the captured energy stored in a comprehensive system of solar panels strategically positioned to take advantage of energetic performance, are part of the basic strategies which allow us to be an independent, 100% sustainable off-grid system.
