

Cyprus renewable electricity

Cyprus renewable electricity

The Turkish Cypriot community passed the "Renewable Energy Resources Law" in 2014, which aims to reduce use of fossil fuels and allow use of alternative energies. The approval and passage of the "law" has drawn the attention of both local businesspeople interested in establishing companies based on RES, as well as household consumers who are interested in using renewable energy. The "Renewable Energy Council" under the "Ministry of Economy and Energy" (website is in Turkish) can provide further information.

The ROC Ministry of Energy, Commerce, and Industry (MECI) and other energy interlocutors are considering RES storage options. This is a potential opportunity for U.S. companies with storage technology equipment and expertise. U.S. companies with photovoltaic or offshore wind technology and products, smart meters and related technology, could find business opportunities with both the government and the private sector.

The International Trade Administration, U.S. Department of Commerce, manages this global trade site to provide access to ITA information on promoting trade and investment, strengthening the competitiveness of U.S. industry, and ensuring fair trade and compliance with trade laws and agreements.
