

Dominican republic nico backup power

Dominican republic nico backup power

We live on the North Coast and are in the market for a Generator. Any recommendations are much appreciated. In an effort to minimize cost we don't feel we need backup power to run the entire house but rather just bare essentials such as a refrigerator, AC and maybe a few lights. What would be the minimum size we would need, and any reputable dealers that could provide installation and service. Thank you

Thank you Papito, from your experience and from what I've read is a 8000 watt generator large enough to get through disruptions? Also, you mention manually switching off appliances you don't need on the system, does this mean unplugging them or just not trying turn them on?
