

EV Charger Installation for Home or Business

EV Charger Installation for Home or Business

Electric vehicles are quickly becoming commonplace on the UK roads, popular with domestic and commercial drivers alike. Our team of renewable technologies experts are here to help your electric or hybrid vehicle to keep motoring on with domestic and commercial EV charger installations.

Our team of electric vehicle charging point installers have years of experience in creating bespoke solutions for your home or business, to ensure you are maximising the benefit of going electric. Our installation team cover the South East of England, across:

At certain hours 'time of use energy tariffs' are significantly cheaper. With zappi, you can use the 'boost timer' option to start charging at times with the lowest rates. It's a cost-saving charging alarm clock for your EV!

zappi is the only electric vehicle charger with built-in PEN fault technology. It's the safest choice for an electric car charger, eliminating the need to install additional earth rods means no extra costs and an easy install.

zappi works in harmony with your Solar PV or wind generation, meaning you can charge your car using green energy for free. If you haven't got a renewable energy source at home, zappi works just like any other charger in 'fast mode'.

A 5 digit pin code is a security feature integrated into this smart electric car charging point, should you wish to use it. It prevents people from changing your settings or using your solar EV charger without permission or tampering.

Our process maximises savings because they are by far the most popular form of energy saving installation. With our low-cost renewable system solutions, you can make your home or business more ecologically friendly!

It is highly recommended that you hire a qualified electrician to perform a safe and compliant installation, especially when high voltage electricity is involved. Many EV charging stations are rather advanced anyway, far beyond the skills of even a competent DIY electrician.

I took a long time to select a solar installer and was happy with the selection of Solar Dynamics st price for like for like system Good pre-contract advice and communication? Prompt start on site, with good installation team. I did have some post installation issues with a faulty inverter, but Robin was very prompt to swap over once the issue was identified. Good communication

EV Charger Installation for Home or Business

Solar Dynamics recently installed our panels and battery in Balcombe. They were clear with what we needed, no hard selling tactics and Mike was honest about what we also didn't need. The install was quick, clean and tidy, and the team were happy to answer all our questions along the way. Would thoroughly recommend!!
