

Electric vehicle market bahamas

The Caribbean island nation of the Bahamas is well-known throughout the world for its stunning beaches and waters. This nation is the ideal location for EVs because of all the uninhabited, beautiful islands it has.

The partnership between BYD and Easy Car Sales could be considered as a catalyst for electromobility in the Bahamas because it marks BYD's entry into the Caribbean region and opens up a brand-new market in larger Latin America.

Sales in the Bahamas reportedly surpassed those of the prior year in the initial few months. According to UHY's research, The Bahamas saw the eighth-largest year-over-year rise in electric car sales worldwide, trailing only Vietnam, the market leader, and countries like Italy, Germany, the UK, Israel, France, and Denmark.

Sales of electric vehicles have increased significantly in The Bahamas year over year. UHY will support the government's continued investment in gradually converting its fleet to electric cars, which will result in long-term savings over the course of the car's life and a less carbon footprint.

Pia knows these are times when the wealthier fools prone to a knee jerk reaction will go out and buy the very expensive equivalent of the gloried suped-up golf carts she is selling. After all, she remembers all the fools in the U.S. who went out and bought small expensive hybrid vehicles the last time there was geo-political turmoil that sent gasoline prices through the roof.

I can't imagine owning one of these suped-up golf carts when the price of a barrel of oil gets back down to the \$60-\$80 range. And can you imagine she claims, no doubt with a straight face, that the battery has a life-time warranty....keep in mind that's not your life-time but rather the battery's much shorter life-time (or perhaps the shorter life-time of mainly plastic vehicle itself) that she wants to sell you for not less than \$27,000 plus VAT.
