

Electricity market trends norway

From the dataset Statistics Norway calculate electricity production, pump storage, and consumption in different groups which is used in the monthly electricity statistics. Data on import and export of electricity is collected from Statnett and electricity production on Svalbard is collected by Statistics Norway in an own survey.

On Nord Pool Spot the electricity spot price is set for Norway. Wholesale market: Electricity producers, electricity suppliers and some industrial enterprises buy and sell power in large quantity primarily for re-sale to end users. End-user market: Customers that buy electricity for their own consumption directly from an electricity supplier.

A market-based power system. The Norwegian Energy Act is based on the principle that electricity production and trading should be market-based, while grid operations are strictly regulated. The power market ensures that effective use of resources and reasonable prices on electricity.

Moreover, Norway's energy demand is highly electrified: in 2020, electricity covered almost half of the country's total final consumption (TFC), the highest share among IEA member countries. Norway has tremendous potential to further leverage its clean electricity system to decarbonise other sectors of the economy through additional ...
