

Electricity policy mexico city

The Sheinbaum administration recently unveiled its National Strategy for the Electric Sector, aiming to strengthen Mexico's state-owned companies. In doing so, it may have overlooked key economic, infrastructural, and technological challenges.

The new Mexican government is moving rapidly to put its imprint on the renewable energy sector. A constitutional reform published in late October deals with the role and participation of public utilities and private companies in the energy sector in Mexico.

The economic development of Mexico City requires sustainable energy growth, so there is the need to mitigate the impact on air quality and the atmosphere caused by the use of the energy necessary for the development of the activities of the different MSMEs that make up the productive and commercial sectors in the City from Mexico.

MEXICO CITY (AP) -- A panel of Supreme Court justices in Mexico ruled Wednesday against President Andr s Manuel L pez Obrador's rules that favored the state-owned electrical power company over private power companies. The five-judge panel approved a resolution saying the president's approach violates constitutional guarantees of free ...

Mexico's Congress is poised to vote on a constitutional reform that would undo much of a 2013 market opening in electrical power and guarantee a majority market share for the state-owned power utility company.

MEXICO CITY (AP) -- A panel of Supreme Court justices in Mexico ruled Wednesday against President Andr s Manuel L pez Obrador's rules that favored the state-owned electrical power company over private power companies.

Previously, power plants bid to supply electricity based on providing the lowest price. But L pez Obrador gave the state-owned Federal Electricity Commission priority in selling power into the grid.

That put private, mostly foreign-owned power generators last in line, despite the fact they often produce cleaner power than the commission, which runs many power plants on fuel oil or coal.

The U.S. government filed an objection to the law, arguing the U.S.-Mexico-Canada free trade agreement prohibits favoring domestic companies over those from other member states.

L pez Obrador put private natural gas plants almost last in line -- ahead of only government coal-fired plants -- for rights to sell electricity into the grid, even though they produce power about 24% more cheaply. The law practically guaranteed the government electrical utility a majority market share.

Lopez Obrador favors state-owned firms and disliked the openings to private investment enacted under previous administrations that allowed foreign firms to build cleaner gas, wind and solar power plants in Mexico.

Mexican President Andres Manuel Obrador smiles as people applaud after the playing of the national anthem at the end of an event where he delivered a speech on economic figures, in Mexico City, Tuesday, April 12, 2022. (AP Photo/Marco Ugarte)
