Generation Charge This refers to the associated costs for the purchase of power from suppliers through Power Supply Agreements (PSAs) with BENECO or the Wholesale Electricity Spot Market (WESM).

Transmission Charge This refers to the associated costs to deliver power from the generators to the various BENECO substation facilities passing through the transmission network managed and operated by the National Grid Corporation of the Philippines (NGCP).

System Loss Charge This refers to the cost to recover the power lost due to technical and non-technical system losses. The maximum level of losses that may be recovered by electric cooperatives was set at 12% by the ERC through its Resolution No. 17, Series of 2008. BENECO is currently maintaining a 9% level of system loss.

Metering Charge This is the charge for the cost of reading, operating and maintaining power metering facilities and associated equipment, as well as other costs attributed to the provision of metering service.

Lifeline Discount or Lifeline Subsidy This is a socialized pricing mechanism under Section 73 of the EPIRA to benefit marginalized/low-income captive market customers. As approved by the ERC, residential customers using up to 45 kWh in a given month enjoy a Lifeline Discount to be applied to the total of the generation,

transmission, system loss, distribution, supply and metering charges. The discount varies according to consumption and is funded by a Lifeline Subsidy Charge to be paid by all other customers.

Value Added Tax This is a consumption tax imposed on the sale of electricity and related services through all the stages of generation, transmission, distribution and sale of electricity to the final consumer. It is a form of indirect sales tax because the total of the VAT collected on each sale transaction in all the stages mentioned is charged to the final consumer as part of the purchased price with sellers and utilities acting merely as tax collectors.

Feed-in-Tariff Allowance is an additional tariff levied on consumers of electric power connected to the grid and will be given to renewable energy (RE) players as an incentive to invest in the more expensive but less lucrative RE sector.
