

Energy consumption calculator app

Energy consumption calculator app

Trying to control the energy consumption and costs of your home or business? We've compiled a list of 15 smartphone apps and tools that will help you keep track of your energy consumption.

Keep in mind, even if you do a great job at tracking and conserving your energy, you're still doing yourself a disservice if you're paying a much higher electricity rate than the rest of the country.

This app comes highly recommended by several review magazines like, *ecogadget*, *treehugger* and *DailyTekk*. Green Outlet was designed to allow users to determine which home appliances consume the most energy. It simply requires some personal data, and then the app will calculate an average monthly rate.

Energy Cost Calculator is free on iTunes and is simple to use. It calculates energy cost of an electronic item based on several equations. All a user needs to do is enter an estimated energy use per hour and hours used per day. The result shows users exactly what they are paying.

Smappee's goal is to provide people with all the information they need to track their energy usage and understand the costs associated to that usage. In order to use the app, Smappee provides a clip on sensor that users can quickly attach to their fuse box. From there, they can view and monitor their energy usage via the free app.

All information is provided to users in real time, and will display energy costs for the previous 30 days. An added benefit to this app is that it can pinpoint all of the appliances in a user's home. From there, one can determine overall cost and energy consumption. Users can also control different energy elements from the app, so that if they are away from home, adjustments are only a few clicks away.

This app was developed to help homeowners wirelessly monitor their energy consumption. While people do need to install sensors to help the app gather the appropriate information, all products are simple to use and don't require professional assistance. Energy usage information is available both online or via the app users can download on their mobile device. The data is available in real-time to assist people in quickly determining where to adjust their energy usage.

This app only works with the Nest Learning Thermostat. It allows users to raise or lower the temperature of their home from several different devices. The benefit to this app is that users can be at work, or out with friends and still have the ability to change the temperature in their home. Therefore, if a user decides to stay out longer, they have complete control over their energy consumption.

This app is free and helps users to make the switch from conventional light bulbs to more efficient ones. While this app doesn't really help track a user's energy consumption, it does help to keep it low by

Energy consumption calculator app

providing users with the right options for their homes. With this app users can:

MeterPlug is, quite simply, a plug that users can put between their appliance and the outlet. These special plugs then automatically send energy usage information to a mobile app. The app shows users just how much energy a single appliance consumes and can calculate the cost of that energy based on time of day. While the app has a range of around 100 feet, it has built in memory, which can be downloaded and viewed once the user returns home.

Neuro is a company that strives to provide information to homeowners about their homes so that they can make better energy saving decisions. They have two products which help users better monitor their consumption: the Home Energy Monitor and the Intelligent Home Monitor.

Both are easy to install and will send details about energy usage to a mobile device via the Neurio app. Alternatively, users can also check this information on a computer. The app helps users to monitor their energy consumption, compare their homes to others, and will also forecast the total cost of a monthly bill.
