## Energy power solutions

Nuestras baterías solares están diseñadas para adaptarse a diferentes necesidades energéticas. Con capacidades que van desde 1000Wh hasta 6000Wh, nuestras soluciones son ideales para apartamentos como para viviendas más grandes. Estas baterías almacenan energía solar generada durante el día para que puedas utilizarla cuando más la necesites, incluso durante apagones prolongados.

Achieving energy efficiency in the power sector is critical to meet ambitious net zero emissions targets. With the power sector accounting for 40% of global greenhouse gas (GHG) emissions, the urgent need to transition towards clean energy resources and decarbonize fossil fuels is undeniable.

We optimize energy management and grid stability with integrated power solutions. Our expertise in microgrids, hybridization, and energy storage enhances renewable integration and tackles intermittency and resilience challenges.

We work closely with utility customers to deliver advanced clean power solutions that enhance grid resilience, facilitate integration of renewable energy, and promote sustainable practices within their communities.

Recognizing that there's no path to net-zero without partnership and collaboration, we'll work together to build a leading portfolio of low-to-no carbon technologies. Our reliable, flexible, and digitally augmented solutions are designed to meet your unique demands.

Creating energy and water solutions to empower people is what we do. We partner with leading technology IP holders to provide the best real-world solutions to real-world problems for our clients in the commercial sector.
