

Energy project management software

Energy project management software

Through existing integrations and our open API, the Smartsheet platform can connect with Procore, Primavera P6, and proprietary software to fill in scheduling and reporting gaps, or help you loop in departments such as legal, finance, or HR.

Capture maintenance items from interior and exterior project sites, sequence and prioritize items in a tracking sheet, manage action items and visualize all items on a Smartsheet Dashboard.

Control Center is a portfolio and project management solution that builds on the core functionality of Smartsheet. Control Center delivers consistent, visible projects and business processes at scale.

As renewable energy, with solar projects leading the way, continues its rise as a cornerstone of renewable power generation, developers face the task of managing multifaceted projects across various phases. From site assessment and permitting to financing and seamless coordination with construction partners, the complexities can be overwhelming. Sitetracker's asset and project management cloud solution streamlines these activities, enhances collaboration, and propels renewable energy projects to unprecedented success.

Engineering, Procurement, and Construction (EPC) companies face a myriad of challenges in the ever-evolving renewable energy landscape. From managing complex data to coordinating subcontractors, tracking contractual obligations, and optimizing field crews, the demands are substantial. Sitetracker streamlines and digitizes the construction process from pre-construction activities to closeout using intelligent templates, milestones tied to billing, and centralized document management.

For renewable energy, the job doesn't end once the wind turbines, solar panels, and battery storage are installed. Operations and maintenance (O& M) companies serve as the guardians of renewable energy installations for the long run and Sitetracker helps these teams run smoothly and overcome many of the challenges they face day-to-day.

Renewable energy asset managers play a crucial role in ensuring the ongoing performance and profitability of installations. To excel in this role, asset managers need to address various challenges, from monitoring project performance to optimizing site operations and managing valuable assets. This is where Sitetracker comes into play by supporting the critical work they do in several ways.

Sitracker is the centralized platform for managing the development, construction, operations, maintenance, and asset management of renewable energy at scale. By providing real time visibility into the project lifecycle, from financing, site assessments, and permitting, to design, construction and interconnection, and long-term asset management, developers, EPCs, O& Ms, and asset managers can easily make data-driven decisions to increase efficiency, scale, and profitability.
