Energy storage research and development united kingdom

Our Connecting Cultures research promotes and connects diverse cultures, fosters social inclusion, shared ownership, and a sense of belonging. Through all of our work we're changing lives and bridging gaps through innovative projects that celebrate diversity.

With the growth of our global population the demand for products, infrastructure, and services also increases, creating a growing burden on our planet's resources and geopolitical relations. To answer this challenge we must alter the world's approach to manufacturing, engineering, and healthcare.

We are on an unrestricted search for answers to better understand the impact of climate change. Developing a sustainable future focused on clean air and water, biodiversity conservation, and clean energy and transport.

Modern health challenges do not discriminate. Non-communicable diseases and mental health conditions continue to increase alongside growing health inequalities. We are committed to addressing the ever-evolving landscape of global healthcare.

Across the world, millions of people fight for justice - from inclusive education and healthcare access, to gender equality and political conflict. We are on an unrestricted mission to address these global challenges.

From atoms to astronomy, computers to cars and robots to robust materials, our goal is to transform our understanding of the world to make life easier, healthier and more sustainable.
