## Energy storage solutions yerevan

Global warming and the limitation of traditional energy sources are one of the most serious challenges for humanity. To prevent the effects of global warming, humanity seeks to create an ecologically cleaner and greener world. That is why the alternative sources of renewable energy became widely spread around the world, and a few years later in Armenia as well.

The involvement of our specialists in the development and dissemination of various savings systems since 2010 led to the formation of GSS company in 2016, the main goal of which is to develop the renewable energy sector in Armenia. And when the legislative reforms were carried out at the end of the same year, favorable conditions were created for the faster implementation of our ideas. And for about 7 years now our company has been moving forward steadily...

On the basis of the roadmap of "GSS" development is our vision - to make Yerevan the regional capital of solar and wind energy by creating a technological and technical center, then making the alternative energy sources as primary ones.

Our main goal is to support the consumers of electricity in being independent in terms of energy, to get and to use clean and renewable energy getting rid of the electricity costs and protecting the environment from polluting energy sources.

During its activity our company has created its distinctive approach which is recorded in each of our projects, and the evidence of this are the positive opinions of our customers.
