

Ev charger quebec

Ev charger quebec

Electric vehicle owners get to fill up in a new way. There's no need to stop at a service station, as most charging takes place at home. What's more, if the workplace is equipped with a charging station, the vehicle can also be charged at work for the trip home.

A Level 2 charge requires a 7-kW charging station connected to a 240-V circuit installed outside your home or in your garage. Charging an electric vehicle at this level corresponds roughly to the electricity used by a 180-litre (40-gallon) water heater over a year.

Electric Circuit members drive with peace of mind, knowing that they can rely on the network for their charging needs while on the road. They can locate charging stations on the website ([lecircuitelectrique](#)) as well as through the mobile app, which also has a trip-planning feature that takes charging stops into account. Members have access to a 24/7 telephone helpline run by CAA-Québec.
