

Finland microgrid applications

Finland has extremely stable electricity grid with minimal losses. One of the most advanced smart grid in the world. Smart grid functionalities such as load profiling, real-time billing, distributed power generation are already in use. Internationally open Smart Otaniemi and Åland Island test beds for smart grid 2.0.

o Finland has an extremely stable electricity grid with minimal losses. o Internationally open Otaniemi and Åland island test beds for smart grid 2.0 o In Finland, many smart grid functionalities (e.g. load profiling, real-time billing, distributed power generation) are already implemented in the system. WORKING WITH FINNISH

Perhaps the most surprising revelation at the conference was this: a unique confluence of factors make Finland the best opportunity for microgrids in Europe. Finland is not only the global leader on smart meter deployments, with 99% of its 3.5 million customers having access to this technology, but it also has a deregulated wholesale and retail ...

Finland invests in key projects like the Marjamäki microgrid to meet their long-term climate and energy strategy goals. Their strategic aims are to reduce greenhouse gas emissions, shift from a dependence on electricity imports to self-sufficiency, and replace electricity generation based on fossil fuels.

Plug& play energy and assets dashboards simplify the day-by-day Microgrid management with all the KPIs in your hands. From the smartphone, you get alerts when required, analyze data from recurring reports and activate logics.

This study was supported by the Academy of Finland under the project Distributed Management of Electricity System (DisMa) [grant/application IDs 322673 and 322676]. The authors acknowledge support from the colleagues from Tampere University (TAU) and the project partner VTT Technical Research Centre of Finland, especially Kalle Ruuth (TAU), Antti Supponen (TAU) and Amir Safdarian (VTT).
