

Fogstar drift battery review

But, what is it about the Drift PRO that makes it so great? It's not just the price (which is always a great feature here at Fogstar), it's not just the 300A JBD BMS, the plug and play Victron integration, the serviceable metal case, or the external JK Active Balancer. No, the great thing about the Drift PRO is its vast multifunctional application, offering more power and more potential than any other leisure battery on the market.

There is no denying that the Drift V1 is a fantastic addition to the UK leisure battery market, and these batteries won't be going anywhere soon - in fact, the Drift Pro just enables customers a much wider choice when it comes to selecting the right battery option to suit their application. So, let's have a deeper look at the brand new Fogstar product that's about to revolutionise the UK Leisure battery market...

When designing the Drift PRO we knew this unit needed an upgraded BMS, enabling us to provide a better solution to those using Inverters of >3000W. The 300A customised JBD BMS is a world first, created by Fogstar, offering the highest continuous discharge of any leisure battery on the market. This will allow users to power inverters up to 3500W.

If that wasn't enough, the BMS has been further customised to allow seamless integration with Victron equipment, such as the Cerbo GX. Plug and play is the name of the game.

Firstly, because our Drift PRO batteries contain matched and balanced Grade A EVE cells, you should not have to use an Active Balancer often, if at all. We recommend plugging the device in every three to six months, for two to three cycles (depending upon levels of cell disparity - if any). Upon checking, it may be the case that your battery doesn't need any redistribution of current across the cells - this is absolutely fine and you don't have to use it.

Active Balancing is a very new technology in the battery world, so building this function into our Drifts with no long term performance data would be a mistake. We would rather wait and see how the technology performs over the next few years before committing to using it permanently in a product with a 10 year warranty. If you're using well balanced, matched, Grade A cells - you shouldn't need to use one, we've simply included it as an added extra at our customers' request.

The development of the Drift PRO is all part of our quest to make Lithium affordable and accessible to customers on all budgets. In fact, our 12v 280ah Drift PRO retails at just ?1099.

If you're a Camper or Boat conversion specialist, our Drift PRO will open doors for you and your up-and-coming builds, get in touch with our Customer Service team for more information on our trade accounts.

Fogstar drift battery review

So there we have it, an introduction into the Fogstar Drift PRO. As you can probably tell, the Drift PRO isn't just a leisure battery. It's a revolution in portable power. So don't get left behind. Your adventures deserve the best.
