

Foldable solar panels for camping

Foldable solar panels for camping

Our elite testing team analyzed each panel's charging abilities, determining that not all 100-watt solar panels are equal. We took these panels out on cheerful, sunny days and dim, overcast conditions, testing them side-by-side to see how they stack up.

The best solar panel for camping in our testing was the Jackery SolarSaga 100. It impressed our testers with its light weight and efficient energy conversion. The BigBlue SolarPowa 100 ETFE was the best value, providing great charging speed, light portability, and a great price tag.

With our detailed testing, we also determined the best all-weather option and the most portable models, along with other notable contenders. Read on to see how they stack up and which option will best fit your needs.

Despite how much we appreciate the portability, the SolarPowa 28 cuts weight by sacrificing any legs to angle it toward the sun. Even though it's one of the heavier portable panels we tested, we think it's worth the weight for its charging capacity and efficiency. If you require plenty of power in changing light conditions while on the go, the SolarPowa is a great and reasonably affordable option we highly recommend. If you prefer a light and foldable panel with fold-out legs, the Jackery SolarSaga 100 is our favorite overall pick.
