The training, organized by PP Engineering and Trading, served as a crucial platform for participants to learn about the latest technologies and best practices, aligning with Ghana's broader goal of expanding renewable energy usage.

"We are doing this training purposely to enlighten the installers about our new products and the value they brings to the renewable market. We have a lot of brands in the solar industry but we believe that GoodWe is a brand to change the game, particularly in the African market," He explained.

Speaking about the attractiveness of the Ghanaian solar market, the Country Manager for GoodWe Wycliff Mwange noted that supportive policies are driving the growth of renewable energy in the country.

"Yes, the policies are friendly, we still have some other issues to firm up on, such as the net export control and other things. So I can say we are on the right track in terms of the policy issues that will really support the growth of these technologies in this market " He added.

However, installer Mawuli Aflakpui expressed concerns over the low interest in the use of solar energy among Ghanaians, attributing this to the prevalence of substandard products and difficulties in accessing warrant

"It's good to have such trainings because for you to come up or construct a standard system, you need some level of training or skill and an understanding of the product. Also we have regulatory bodies, and expect that they should step up their work and make sure that we have standard component on the market if not, we will always have problems with these substandard material we find on our market. The Regulators should step up their game and regulate the influx of these substandard products on the market. " He remarked.
