## Goal Zero Yeti 400 Review Should You Buy It

There is a fold-away carry handle for easy portability, and the LCD screen display tells you all the essential information you need to know at a glance. You can see both the input and output in watts, and you can also keep an eye on the battery level so you know when you've got a low battery approaching.

The Yeti 400 is good for charging smaller, everyday items that don't have a huge power draw. It's perfect for small appliances like mini-fridges, although you need to be mindful that they will drain the battery quite quickly.

Personally, I like to use the Yeti 400 to power my camping lights that keep my tent nice and visible. By the time I've powered by camping lights, charged my phone a few times, and charged my tablet a couple of times, I can normally get 2-3 days of use out of this thing.

But for something that's going to charge my phone and my iPad a few times, this thing weighs A LOT. Now I understand that this is the cheaper lead-acid battery version, so it makes sense that it weighs a lot, but it's still really infuriating.
