## Grid modernization taipei

The Company consolidated existing renewable energy generation and established an information management platform, created platforms for power market trading and coal-fired unit big data monitoring, and introduced a Distribution-level Renewable Energy Advanced Management System (DREAMS). The real-time monitoring capacity of renewable energy (GW) reached 6.23 GW in 2023.

Plan, operate, and maintain transmission system data, and consolidate information to strengthen the management of power transmission and distribution assets. In 2023, the average failure time of transmission system equipment was 0.34 hours/year.

The Taiwan Power Company proposed a ten-year NT\$188.4 billion (US\$6.05 billion) project on Thursday to enhance the resilience of the national grid, after a nationwide power outage in March exposed the fragility of the "overly centralized" delivery network, officials said that day.
