Hailos official website

Our processors are geared towards the new era of generative AI on the edge, in parallel to enabling perception and video enhancement through our wide range of AI accelerators and vision processors.

The Hailo-15 family of AI vision processors combines Hailo's patented and field proven AI inferencing capabilities with advanced computer vision engines, enabling unprecedented video processing and analytics at a premium image quality.

The Hailo-8 AI accelerator allows edge devices to run deep learning applications at full scale more efficiently, effectively, and sustainably, with an architecture that takes advantage of the core properties of neural networks.

Smallest available GenAI accelerator, in a standard M.2 form factor, supporting a wide range of transformer models and LLMs in particular. Bringing AI to the edge through cost-efficient and low power consumption processor, ideal for the personal computer and automotive industries.

Hailo develops top-performing AI processors specifically designed to enable AI tasks on the edge. By making high performance AI widely available and affordable, we help making people's lives safer, more convenient and more productive, without compromising their privacy and security with AI at the edge.
