Livguard Solar LS OG1150 Solar UPS has in built 50Amps solar charge controller which extracts maximum power from upto 900wp solar panels to charge the battery in short time. Livguard Solar OG1150 UPS has in-built intelligent real time clock (RTC) technology which optimized solar energy utilization based on localized power situation. It also provide additional safety and protection over voltage/current protection in bypass mode technology.

If you're on the hunt for a giant TV, but don't want to pay full price or sacrifice picture quality, I have some good news for you – myself and the wider team of home cinema experts at What Hi-Fi? has already spotted a number of cracking Black Friday TV deals on some of 2024's best gargantuan sets.

These include everything from top of the line OLEDs to, by 75-inch TV standards, affordable Mini LED models. Here are the top three we'd recommend considering if you're after a new big screen TV right now.

Good, "cheap" giant screen TVs are a very rare thing. Which is why the 85-inch TCL805K was one of 2024's standout stars. The giant Mini LED set is the only affordable, by giant TV standards, sets to secure a perfect five-star rating from our team of testers this year.

So seeing it drop to its lowest price ever this Black Friday, which lets you buy the 85-inch TCL 805K for £1299 on Amazon, is excellent news for any home cinema bargain hunter. That's a £500 saving on its regular price.

Our reviewers openly describe the TCL 805K as "the best bang for your buck" 85-inch TV currently available, even at full price, so the current deal makes it an absolute steal in my eyes.

The What Hi-Fi? Award winning set features a giant Mini LED panel which during our testing delivered solid contrast and immersive levels of max brightness. While its blacks aren't as deep as competing OLEDs, its solid HDR support and next-generation connectivity make it the best option you'll get at this price.

"Despite costing less than some 55-inch TVs, the TCL 85C805K manages to combine the sheer largesse of its 85-inch pictures with excellent gaming support and genuinely cinematic and immersive picture and sound quality. In other words, it's pretty much a dream come true for home cinema fans who aren't lucky enough to have limitlessly deep pockets."

Got a bit more cash to spare and have perfect blacks and a 75-inch or larger screen as essential items on your wish list this Black Friday? Then I recommend taking a look at the latest discount on the 77-inch Philips

Inverters for led tv

OLED809. You can currently buy the 77-inch Philips OLED809 for &#pound;1999 at Richer Sounds. That’s a massive &#pound;1250 saving on its regular price.

We reviewed the 65-inch Philips OLED809 earlier this year and awarded it a perfect five star rating. For those new to the set, it’s the step down option in Philips latest line of OLEDs, targeting the same space as the award-winning LG C4 and Sony Bravia 8. While we favour those sets generally due to their slightly more subdued, but authentic picture, the current discount on the OLED809 is hard to ignore – especially if you favour the brand’s “blow your socks off” approach to TV tuning.

The OLED delivered one of the punchiest, brightest and boldest pictures we experienced this year when we reviewed it, and comes with the added perk of Philips Ambilight bias lighting. The latter is unique to Philips TVs and uses smart LED lights around the TV’s frame to do clever things like reduce eye strain and improve immersion by using clever colour matching to extend the picture beyond the screen.

Philips has designed it with an overt focus on helping it deliver exceptional results in regular home viewing conditions, as well as the pitch-black environment favoured by cinephiles [in these conditions] it delivers a wonderfully wide colour palette and brilliantly high max brightness, which leads to a truly immersive viewing experience.”
