

Italy microgrid design

NREL partnered with the U.S. Army Garrison Italy (USAG Italy) to perform a microgrid feasibility and conceptual design analysis for three of USAG Italy's military installations located in Vicenza, Italy. NREL used the REopt(R) model to identify the cost-optimal mix and dispatch of energy generation and storage systems in utility-connected mode, and to evaluate life cycle costs and savings of various microgrid configurations.

NREL used REopt to estimate the life cycle cost and net present value of each of the various microgrid configuration options. USAG Italy is using these results to inform their microgrid design and investments for future projects.

With the growth of renewable energy sources, microgrids have become a key component in the distribution of power to localized areas while connected to the traditional grid or operating in a disconnected island mode. Based on the extensive real-world experience of the authors, this cutting-edge resource provides a basis for the design, installation, and day-by-day management of microgrids.

Microgrid Design and Operation is a practical guide full of deep expertise to help facilitate the design, implementation, and effective management of microgrids. As a member of the International Sustainable Campus Network (ISCN), The University of Genoa shares their real-world experiences from implementing the first low voltage Smart & Sustainable Microgrid in Italy. We recommend this resource to those seeking practical examples to successfully adopt microgrid technology and advance sustainability performance on campus.

Telebit is an Italian e-mobility general contractor providing a range of products and services for designing and managing EV charging stations, especially high-power charging units with MV-LV transformer substations, storage, and photovoltaic systems.
