Hybrid inverters can operate in numerous ways depending on the application. Predominantly, a three-phase inverter takes DC electricity which is supplied through the solar panels and converts this into AC electricity which is then distributed across a three-phase supply.

Using a three-phase inverter is extremely useful for homes that use a considerable amount of electricity e.g., large air conditioners, pool heaters, spas, saunas, and electric car chargers.

Having a three-phase inverter also means that you do not need to push the solar energy as much to get it out of the grid. You will have a lot less tripping off as you are increasing the local grid voltage less. In short, having a three-phase solar inverter will significantly reduce the chances of having any voltage rise issues!

When you need more power than one inverter can provide, you can connect two or more inverters in parallel. This increases the total wattage that the inverters can produce and gives you added redundancy in case of a failure.

Inverter control is made easier with an innovative product, for example with an LCD display showing power, voltage, DC and AC current, as well as daily, monthly and yearly energy production.

It is most convenient to do it from a computer, especially a tablet or smartphone. Monitor the installation as often as possible, and you will sooner notice that something is wrong with it. If there are any issues, please contact your installer immediately.

An inverter synchronized with the grid (grid, hybrid) counts the energy produced by the solar panels, and at the same time reads the current drawn from the power grid. In this way, you can know the difference between the electricity you use for your own needs and the electricity that you feed into the grid. You can compare this data in different cycles (e.g. day, week, month, year).

The Fox ESS KH10 presents a sleek 10kW single-phase IP65 full hybrid inverter, designed to enhance your solar experience with maximum efficiency. Utilising high-voltage batteries, it ensures optimal round-trip efficiency, amplifying the productivity of your solar setup. Streamlined Installation, Effortless Management Installing the Fox ESS KH10 is a breeze, saving you valuable time on-site. With the Fox ESS Cloud, remote monitoring and control become effortlessly accessible, empowering seamless support from any location. Key Features of Fox ESS KH10

The Fox ESS KH10 boasts a durable outdoor design, expertly crafted to withstand various environmental conditions with ease. With its IP65 rating, this hybrid inverter is specifically tailored for outdoor installations, guaranteeing resilience and dependability in any setting. Whether enduring extreme weather or challenging
