Kingston solar energy companies

At SunCommon, we make the transition to clean energy simple and affordable. We've already helped over 10,000 customers with solar and energy storage solutions for homes, businesses, farms, non-profits and municipalities -- maybe you're next?

Made of sustainably harvested timber, the Solar Canopy can go over your driveway, patio, or woodpile, and can even support an EV charger. Dual-sided panels make it our most productive solar system per square foot.

With SunCommon, you get more than just a company to install your solar panels -- we're your partner every step of the way. From planning and financing, through permitting, design, engineering, and construction, our team is there to make your experience smooth and hassle free.

SunCommon's Quick Quote Tool is a fast, commitment-free way to get an idea of what a monthly payment could look like for solar and/or energy storage based on just your address, your utility, and your average monthly electric bill.

SunCommon has been operating in Vermont since 2012 and in New York since 2002! As the most tenured local solar company in our regions, we're deeply committed to these beautiful communities. We're dedicated to this place just like you, which means we're equally invested in creating stronger, more vibrant communities together for years to come. Read more about what sets SunCommon apart.

SunCommon installed a beautiful solar panel system on our house in Rhinebeck NY. The whole process from start to finish was so quick and easy because their staff was amazing! Everyone was friendly and super helpful and handled every step so professionally.

This was technically our 2nd project with SunCommon. We installed solar panels several years ago and just added Tesla powerwalls to our system. From beginning to end the step by step communication was incredible. The on-site folks were professional, yet friendly. Always COVID safe. Highly recommended.

Welcoming SunCommon sends the message that this community is proactive in how we think about our energy production and use. When I see solar panels I see progress. We need to be responsible in understanding where our power comes from. While our convenience culture has led to an increased demand on energy, we can now turn to a new, affordable and convenient solution: solar power.

We couldn't put a traditional ground-mounted solar array in our backyard because it would have taken up valuable yard space. When we saw the design of the Solar Canopy and how beautiful it looked -- not to mention its functionality -- we were sold. Our Solar Canopy will produce more than enough electricity for our home and electric vehicle while serving as our covered patio.

Kingston solar energy companies

This was our second experience with the amazing Sun Common team. We added more solar panels, a Tesla PowerWall and an EV charger. SunCommon is always professional, courteous, knowledgeable and thorough!

I have always had an interest in doing the right thing for my community by using renewable energy. SunCommon made it easy to go solar. I had an absolutely delightful experience working with them and haven't had an electric bill since my panels were installed in December of 2014. My only regret is that I didn't do it sooner.

SunCommon does their best to lower the barrier of entry to solar, and that's what sold us. We're both pretty low income, so being able to have solar panels feels like a real luxury. I've got a power plant in my yard now - I'm a power plant! That's cool! It's noiseless, it's emission-less, and the amount of money it's going to save is just mind-boggling.
