

Lithium-ion battery technology mali

A joint venture with Leo Lithium and Ganfeng, the Goulamina Lithium Project in Mali is West Africa's first spodumene producer to supply the booming lithium-ion battery industry.

The Goulamina Lithium Project (Goulamina) is a spodumene project with development underway, located 50km west of Bougouni in Mali with all approvals and key permits received to bring the project into production.

High quality concentrate has been validated by test work, including production of concentrate grade of 6% Li₂O, and low mica. Goulamina concentrate has all the preferable characteristics for battery applications.

Open-pit mining operations to be conducted via conventional drill-and-blast and load-and-haul methodologies Mining to take place over four key areas (Main, Sangar, Danaya and West)

Lithium is a chemical element with the symbol Li. Lithium is found in various naturally occurring sources, including brine deposits, hard rock minerals such as spodumene and petalite, and clay deposits.

Africa Intelligence brings you exclusive coverage of the major political, economic and diplomatic issues at stake on the African continent, identifying power players on the rise and low-frequency signals on the horizon. Non-process infrastructure includes a power station (with renewable / hybrid options), 200-room camp, tailings facility and water supply via S?lingu? Dam located to the west of the site, through a 25km long pipeline.

Le Projet de Lithium de Goulamina au Mali est une Co-Entreprise de Leo Lithium et de Ganfeng. Ce Projet est le premier producteur de spodum?ne d'Afrique de l'Ouest ? approvisionner l'industrie en plein essor des batteries lithium-ion.

Le Projet de Lithium de Goulamina (Goulamina) est un projet de spodum?ne en cours de d?veloppement, situ? ? 50 km ? l'ouest de Bougouni au Mali avec toutes les approbations et permis cl?s re?us pour mettre le Projet en oeuvre.

Un concentré de haute qualité a été validé par des travaux d'essai, y compris la production d'un concentré d'une teneur de 6 % de Li₂O et d'une faible teneur en mica. Le concentré de Goulamina présente toutes les caractéristiques souhaitables pour les applications de batteries.
